## 1. Overview

This software guide applies for Artila's Cortex-A7 i.MX6ULL related models. It includes of M-X6ULL-B SoM (System on Module), Matrix-75x series Industrial IoT gateway and SBC-7530 single board computer.

- **Operation System**

- Linux kernel 5.4.x (or Above)
- Supports bootup from eMMC or SD card
- Support Backup/Restore via SD card or USB device
- Boot Loader: Barebox
- File System: EXT4
- GUI Engine: X11

- **Software Development**

- Toolchain: gcc 9.3 + glibc 2.31
- Supports in-place C/C++ code compilation

- **Package Management**

- Package repository: Artila self-maintained repository
- Command: Using standard apt-get command

- **Popular Packages**

- Web server: Apache/Nginx/Lighttpd
- Database: MySQL/SQLite3/PostgreSQL
- Script Language: PHP/Python/Perl/NodeJS
- Text editor: vim/nano/sed
- Administration: Webmin

- **Protocol Stacks**

- IPV4, ICMP, ARP, DHCP, NTP, TCP, UDP, FTP, HTTP, PPP, PPPoE, CHAP, PAP, SNMP V1/V3, SSL, SSH 1/2

- **Utilities**

- Bash: Shell Command
- Telnet: Telnet client program
- Busybox: Linux utility collection
- FTP: FTP client program

- **Daemon**

- pppd: Dial In/out over serial port and PPPoE
- snmpd: SNMP agent program
- ftpd: FTP server program
- nginx: Web server program
- sshd: secured shell server
- iptables: Firewall service manager

- **Standard Device Drivers**

- ttymxc0: serial console port (CORTEX-A7 SERIES debug port)
- ttymxc1~ttymxc4: serial ports (CORTEX-A7 SERIES UART0~UART3)
- gpio: General Purpose I/O
- mmc: SD/MMC:
- rtc: Real Time Clock
- sda: USB flash memory disk
- ttyACM: USB Modem
- ttyUSB: USB RS-232 adaptor
- spi: spi bus

- **I/O devices Control**

Use standard I/O device control to access following devices:

- Ethernet: eth1
- Serial Ports: ttymxc1, ttymxc2, ttymxc3, ttymxc4
- Serial Console Port: ttymxc0
- Real time clock: rtc0
- USB Flash Disk: sda, sda1, sdb, sdb1
- SD memory Card: mmc0
- USB Serial Cable: ttyUSB0, ttyUSB1
- SPI bus: spi0

- **Default Setting**

- IP Default setting:
  - eth1: 192.168.2.127 (Netmask: 255.255.255.0)
- ssh Login: root
- Password: root
- Terminal type: VT100

## 2. Access the USB Serial Console

### 2.1 USB Serial Console Introduction

All the Cortex-A7 Series based Matrix IoT gateways come with a USB client port (micro-USB connector), which is used as the serial console. Please prepare a USB-to-microUSB cable to connect the Matrix IoT gateway to a PC.

When the Matrix IoT gateway finished its boot up process, it will automatically emulate an USB CDC compatible serial device.

Cortex-A7 Series based Matrix IoT gateway comes with a USB client port	Use a standard on-the-shelf USB-to-MicroUSB cable to connect to the Matrix-7XX	Linux/Windows/OSX Desktop/Notebook PC
		

The identifier name of the CDC serial port varies depending on your computer's operation system and the numbers of the serial ports which are already installed on your computer.

On Linux system, the serial port name appears like `ttymxc0`, etc.

On OSX system, the serial port name appears like `tty.usbmodem1421`, `tty.usbmodem1422`, etc.

On Windows system, the serial port name appears like `COM3`, `COM4`, etc.

The serial communication parameters are: **115200**, **N81**, **VT100**. Use your preferred serial terminal tools to access the Matrix IoT gateway's serial console.

For example:

On Windows system, use **putty** or **teraterm**.

On Linux/OSX system, use **minicom** utility.

#### Note

For Linux, Mac OSX and Windows 10 computers, the CDC serial driver is already built-in and will be activated automatically.

## 2.2 USB Serial Console Log-in

User name: root

Password: root

Following example by Matrix-752

```

Welcome to

[root@matrix_120601 ~]#

```

### 3. Network Settings

#### 3.1 Config the Network Interface

The Cortex-A7 Series based Matrix IoT gateways come two Ethernet ports, the default network settings are shown below:

Ethernet Type	Port Label	Device mapping	IP mode	IP address
10/100Mbit	LAN	eth0	DHCP	auto
10/100Mbit	LAN	eth1	static	192.168.2.127

Users may need to modify the network settings to meet their LAN environment. The network interface configuration file path is `/etc/network/interfaces`. Edit and save the configuration file, then use `ifdown` and `ifup` command to ON/OFF the specific network interface to activate the network settings.

```
[root@matrix_120601 ~]# cat /etc/network/interfaces
# /etc/network/interfaces -- configuration file for ifup(8), ifdown
(8)

# The loopback interface
auto lo
iface lo inet loopback

# Wired or wireless interfaces
auto eth0
iface eth0 inet dhcp

auto eth1
iface eth1 inet static
    address 192.168.2.127
    netmask 255.255.255.0
    network 192.168.2.0
    #gateway 192.168.2.1

[root@matrix_120601 ~]#
```

The following screen capture shows the eth0 of the Matrix-752 got a valid IP: 192.168.1.93.

```
[root@matrix_120601 ~]# ifdown eth0
[root@matrix_120601 ~]# ifup eth0
udhcpc: option -h NAME is deprecated, use -x hostname:NAME
udhcpc (v1.24.1) started
Sending discover...
Sending select for 192.168.1.93...
Lease of 192.168.1.93 obtained, lease time 86400
/etc/udhcpc.d/50default: Adding DNS 208.67.220.220
/etc/udhcpc.d/50default: Adding DNS 208.67.222.222

[root@matrix_120601 ~]#
```

## 3.2 Configure the DNS Server

The DNS configuration file path is `/etc/resolv.conf`. Users may edit the file according to their specific network environment.

```
[root@matrix_120601 ~]# cat /etc/resolv.conf

[root@matrix_120601 ~]# ifconfig eth1
eth1      Link encap:Ethernet  HWaddr 00:13:48:12:06:02
          inet addr:192.168.2.127  Bcast:192.168.2.255  Mask:255.255.25
          5.0
          inet6 addr: fe80::213:48ff:fe03:84a/64 Scope:Link
          UP BROADCAST RUNNING MULTICAST  MTU:1500  Metric:1
          RX packets:126 errors:0 dropped:0 overruns:0 frame:0
          TX packets:45 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:1000
          RX bytes:14966 (14.6 KiB)  TX bytes:3770 (3.6 KiB)
          Interrupt:41 Base address:0xc000

[root@matrix_120601 ~]# ping google.com
ping: unknown host google.com

[root@matrix_120601 ~]# echo 'nameserver 8.8.8.8' > /etc/resolv.conf

[root@matrix_120601 ~]# cat /etc/resolv.conf
nameserver 8.8.8.8

[root@matrix_120601 ~]# ping google.com
PING google.com (216.58.200.238) 56(84) bytes of data.
64 bytes from tsa03s01-in-f14.1e100.net (216.58.200.238): icmp_seq=1 t
ttl=52 time
=13.9 ms
64 bytes from tsa03s01-in-f238.1e100.net (216.58.200.238): icmp_seq=2
ttl=52 tim
e=15.3 ms
^C
--- google.com ping statistics ---
2 packets transmitted, 2 received, 0% packet loss, time 1002ms
rtt min/avg/max/mdev = 13.910/14.616/15.322/0.706 ms
```

**Warning:** Please be noted that, the `/etc/resolv.conf` is physically located in the RAM disk, so the content of the file will disappear after system reboot.

## 4. Access the SSH Console

Most Linux/OSX computers come with built-in SSH client utility. For Windows users, it is highly recommended to use **putty** as an SSH client.

User name: **root**

Password: **root**

```
$ ssh root@192.168.1.64
The authenticity of host '192.168.1.64 (192.168.1.64)' can't be established.
ECDSA key fingerprint is SHA256:gQQ9QzBGV0F0fZCmP5qLxiorKbP1RqJDlnLuklLZVhQ.
Are you sure you want to continue connecting (yes/no)? y
es Warning: Permanently added '192.168.1.64' (ECDSA) to the list of known hosts.
root@192.168.1.64's password:
Last login: Fri May 6 20:47:14 2016 from 192.168.1.54 Welcome to

      **                ** **
      **                ** **
      ** **            ** **
      ** **          **** ** **   *****
**      **   **   **   ** **   **
**      **   **   **   ** **   *****
*****          **   **   ** **   **
**      **   **   **   ** **   **
**      **   **   **   ** **   *****

For further information check:
http://www.artila.com/

[root@matrix_120601 ~]#
```

## 5. Check Linux Kernel Version

```
[root@matrix_120601 ~]# uname -a
Linux Matrix_120601 5.10.59- rt51 #1 PREEMPT_RT Sun Aug 15 12:00:27 UT
C 2021 armv7l armv7l armv7l GNU/Linux

[r root@matrix_120601 ~]# uname -v
#1 PREEMPT_RT Wed Nov 18 18:20:34 UTC 2021

[root@matrix_120601 ~]# uname -r
5.10.59- rt51
[root@matrix_120601 ~]#
```

## 6. File System Information

The Cortex-A7 Series based Matrix IoT gateways come with 16GB on-board eMMC Flash memory, which contains boot loader, Linux kernel, root file system and user disk (/home).

```
[root@matrix_120601 ~]# lsblk
NAME                MAJ:MIN RM   SIZE RO TYPE MOUNTPOINT
mmcblk0             179:0    0  7.3G  0 disk
`--mmcblk0p1 179:1    0  7.3G  0 part /
mtdblock0           31:0    0  8.3M  0 disk
mtdblock1           31:1    0  8.2M  0 disk
mtdblock2           31:2    0  7.7M  0 disk
mtdblock3           31:3    0  7.7M  0 disk
mtdblock4           31:4    0  7.6M  0 disk
mtdblock5           31:5    0  3.9M  0 disk

[root@matrix_120601 ~]#
```

```
[root@matrix_120601 /]# ls -F
bin/ boot/ dev/ etc/ gpio/ home/ lib/ lost+found/ media/ mnt/
proc/ run/ sbin/ swapfile sys/ tmp@ usr/ var/

[root@matrix_120601 ~]#
```

## 7. Serial Port Settings

### 7.1 Port Mapping

The Cortex-A7 Series based Matrix IoT gateways come with four or eight serial communication ports. The first four serial ports are CPU native serial ports. Some Cortex-A7 Series based Matrix IoT gateways provide more serial ports via USB-to-Serial chip. The serial port mapping information is listed below:

Port 1 → /dev/ttymx1

Port 2 → /dev/ttymx2

Port 3 → /dev/ttymx3

Port 4 → /dev/ttymx4

### 7.2 Configure the Serial Port

Please use the built-in **setuart** utility to display/modify the operation mode (RS-232/485) and communication parameters of the first four serial ports (ttymx1/2/3/4).

```
[root@matrix_120601 ~]# setuart -h
Artila utility: setuart
Usage: setuart [OPTION]

-h      display this help and exit
-v      print version number and exit
-p      uart port number
-t      uart interface type [232,485]
-b      set baudrate, up to 921600bps

Examples:
  setuart -p 1                display port 1 type and baudrate
  setuart -p 1 -t 485 -b 115200 set port 1 type RS-485 and baud to 115200
  setuart -p 1 -t 232 -b 9600  set port 1 type to RS-232 and baud to 9600
```

#### ⚠ Caution

The serial port's mode and associated communication parameters will go back to factory default after system reboot.

## 8. System Time and Real-Time Clock(RTC)

### 8.1 Adjust System Time by data Command

The Cortex-A7 Series based Matrix IoT gateways support standard **date** command to adjust the Linux system time manually. A typical usage is: **date MMDDhhmmYYYY**.

```
[root@matrix_120601 ~]#date 050717132016
Sat May 7 17:13:00 UTC 2016
```

### 8.2 Adjust RTC by hwclock Command

To adjust the on-board Real-time clock (RTC), please follow the steps shown below: First, to adjust the system time by using the **date** command. Then use the **hwclock** command to synchronize the system time to the RTC.

A typical usage is: **hwclock -w**.

```
[root@matrix_120601 ~]#hwclock
Thu May 26 15:31:49 2016 0.000000 seconds

[root@matrix_120601 ~]#date
Thu May 26 15:32:00 UTC 2016

[root@matrix_120601 ~]#hwclock -w

[root@matrix_120601 ~]#
```

### 8.3 Synchronize System Time by NTP Server

#### 8.3.1 Install the ntpdate utility

The Cortex-A7 Series based Matrix IoT gateways support the **ntpdate** NTP client utility to synchronize the system date with specified NTP server. Users need to install the **ntpdate** utility first by executing the **apt-get install ntpdate** command.

```
[root@matrix_120601 ~]#apt-get install ntpdate
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following NEW packages will be installed:
 ntpdate
0 upgraded, 1 newly installed, 0 to remove and 0 not upgraded.
Need to get 0 B/41.0 kB of archives.
After this operation, 0 B of additional disk space will be used.
Selecting previously unselected package ntpdate.
(Reading database ... 17344 files and directories currently installed.)
Preparing to unpack .../ntpdate_4.2.8p9-r0_armhf.deb ...
Unpacking ntpdate (4.2.8p9-r0) ...
Setting up ntpdate (4.2.8p9-r0) ...
```

### 8.3.2 Using the ntpdate utility

The following example shows how to use the *ntpdate* utility to synchronize the system with the NTP server **0.pool.ntp.org**.

```
[root@matrix_120601 ~]# date
Mon Apr 10 07:17:31 UTC 2017

[root@matrix_120601 ~]# date 050717132016
Sat May 7 17:13:00 UTC 2016

[root@matrix_120601 ~]# ntpdate 0.pool.ntp.org
10 Apr 07:18:36 ntpdate[1025]: step time server 61.216.153.106 offset
29167497.848661 sec

[root@matrix_120601 ~]# date
Mon Apr 10 07:18:45 UTC 2017

[root@matrix_120601 ~]# date;hwclock
Mon Apr 10 07:18:59 UTC 2017
Mon Apr 10 07:18:58 2017 0.000000 seconds

[root@matrix_120601 ~]# hwclock -w

[root@matrix_120601 ~]# date;hwclock
Mon Apr 10 07:19:15 UTC 2017
Mon Apr 10 07:19:15 2017 0.000000 seconds
```

## 9. Insert Kernel Modules

Users can use command **lsmod** to list all installed kernel modules.

```
[root@matrix_120601 rc5.d]# lsmod
Module                Size Used by
usb_f_mass_storage    25809  2
usb_f_acm              4064   2
u_serial              7750   3 usb_f_acm
libcomposite          33643  12 usb_f_acm,usb_f_mass_storage
nfsd                  251055 11
auth_rpcgss           39359   1 nfsd
oid_registry          2441   1 auth_rpcgss
exportfs              3541   1 nfsd
nfs_acl               2510   1 nfsd
lockd                 53405   1 nfsd
grace                 1627   2 nfsd,lockd
sunrpc                175725 16 auth_rpcgss,nfsd,nfs_acl,lockd
atmel_usba_udc        15098   0
udc_core              10846   5 usb_f_acm,usb_f_mass_storage,atmel_usba_
udc,u_serial,libcomposite
```

To load additional kernel modules during the system boot-up, you can modify the file:  
**/etc/modules**.

```
[root@matrix_120601 ~]# cat /etc/modules
atmel_usba_udc
#g_serial
#mt7601Usta
```

## 10. Insert Software Package

The Cortex-A7 Series based Matrix IoT gateways support standard **apt** (Advanced Package Tool) package management utility. With this utility, users can easily install, upgrade, remove software packages. Artila provides a self-maintained software repository. The apt configuration file path is **/etc/apt/sources.list**.

```
[root@matrix_120601 ~]#ls /etc/apt
apt.conf apt.conf.d preferences.d sources.list sources.list.d

[root@matrix_120601 ~]#cat /etc/apt/sources.list
deb [trusted=yes] http://www.artila.com/download/imx6ul/linux/deb/cor
texa7hf-neon cortexa7hf-neon main
deb [trusted=yes] http://www.artila.com/download/imx6ul/linux/deb/cor
texa7t2hf-neon cortexa7t2hf-neon main
deb [trusted=yes] http://www.artila.com/download/imx6ul/linux/deb/cor
texa7t2hf-neon-mx6ul cortexa7t2hf-neon-mx6ul main
deb [trusted=yes] http://www.artila.com/download/imx6ul/linux/deb/all
all main
deb [trusted=yes] http://www.artila.com/download/imx6ul/linux/deb/m_x
6ull m_x6ull main
```

\*\* Please be noted the last line of the **/etc/apt/sources.list** varies according to specific model name.

Commonly used apt commands are listed below:

- **apt-get install** <package> to install package
- **apt-get remove** <package> to remove package
- **apt-cache search** <package> to search package
- **apt-get update** to update the package list
- **apt-get upgrade** to upgrade installed packages

## 11. Mount/Unmount an SD Card

The Cortex-A7 Series based Matrix IoT gateways support SD card access. If an SD card is inserted, you can use **lsblk** command to find the device identifier name. And then use **mount** command to mount the SD card to a folder.

### Before SD Insertion

```
[root@matrix_120601 ~]# lsblk
NAME                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
mmcblk0             179:0    0  7.3G  0 disk
`--mmcblk0p1        179:1    0  7.3G  0 part /
mtdblock0           31:0    0   8.3M  0 disk
mtdblock1           31:1    0   8.2M  0 disk
mtdblock2           31:2    0   7.7M  0 disk
mtdblock3           31:3    0   7.7M  0 disk
mtdblock4           31:4    0   7.6M  0 disk
mtdblock5           31:5    0   3.9M  0 disk
```

### After SD Insertion

```
[root@matrix_120601 ~]# lsblk
NAME                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
mmcblk0             179:0    0  7.3G  0 disk
`--mmcblk0p1        179:1    0  7.3G  0 part /
mmcblk1            179:24   0  1.9G  0 disk
mtdblock0           31:0    0   8.3M  0 disk
mtdblock1           31:1    0   8.2M  0 disk
mtdblock2           31:2    0   7.7M  0 disk
mtdblock3           31:3    0   7.7M  0 disk
mtdblock4           31:4    0   7.6M  0 disk
mtdblock5           31:5    0   3.9M  0 disk
```

### Mount mmcblk1 to /media.

```
[root@matrix_120601 ~]# mount /dev/mmcblk1 /media
[root@matrix_120601 ~]# lsblk
NAME                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
mmcblk0             179:0    0  7.3G  0 disk
`--mmcblk0p1        179:1    0  7.3G  0 part /
mmcblk1            179:24   0  1.9G  0 disk /media
mtdblock0           31:0    0   8.3M  0 disk
mtdblock1           31:1    0   8.2M  0 disk
mtdblock2           31:2    0   7.7M  0 disk
mtdblock3           31:3    0   7.7M  0 disk
mtdblock4           31:4    0   7.6M  0 disk
mtdblock5           31:5    0   3.9M  0 disk
```

### Unmount /media.

```
[root@matrix_120601 ~]# umount /media
```

## 12. Mount/Unmount a USB Card

The Cortex-A7 Series based Matrix IoT gateways support generic USB drives. If an USB drive is inserted, you can use **lsblk** command to find the device identifier name. And then use **mount** command to mount the USB drive to a folder.

### Before USB drive Insertion

```
[root@matrix_120601 ~]# lsblk
NAME                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
mmcblk0             179:0    0   7.3G  0 disk
`--mmcblk0p1        179:1    0   7.3G  0 part /
mtdblock0           31:0    0   8.3M  0 disk
mtdblock1           31:1    0   8.2M  0 disk
mtdblock2           31:2    0   7.7M  0 disk
mtdblock3           31:3    0   7.7M  0 disk
mtdblock4           31:4    0   7.6M  0 disk
mtdblock5           31:5    0   3.9M  0 disk
```

### After USB drive Insertion

```
[root@matrix_120601 ~]# lsblk
NAME                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
sda                 8:0      1  14.5G  0 disk
`--sda1             8:1      1  14.5G  0 part
mmcblk0             179:0    0   7.3G  0 disk
`--mmcblk0p1        179:1    0   7.3G  0 part /
mtdblock0           31:0    0   8.3M  0 disk
mtdblock1           31:1    0   8.2M  0 disk
mtdblock2           31:2    0   7.7M  0 disk
mtdblock3           31:3    0   7.7M  0 disk
mtdblock4           31:4    0   7.6M  0 disk
mtdblock5           31:5    0   3.9M  0 disk
```

### Mount sda1 to /media.

```
[root@matrix_120601 ~]# mount /dev/sda1 /media
[root@matrix_120601 ~]# lsblk
NAME                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
sda                 8:0      1  14.5G  0 disk
`--sda1             8:1      1  14.5G  0 part /media
mmcblk0             179:0    0   7.3G  0 disk
`--mmcblk0p1        179:1    0   7.3G  0 part /
mtdblock0           31:0    0   8.3M  0 disk
mtdblock1           31:1    0   8.2M  0 disk
mtdblock2           31:2    0   7.7M  0 disk
mtdblock3           31:3    0   7.7M  0 disk
mtdblock4           31:4    0   7.6M  0 disk
mtdblock5           31:5    0   3.9M  0 disk
```

### Unmount /media.

```
[root@matrix_120601 ~]# umount /media
```

## 13. Web Server Settings

### 13.1 Nginx Web Server

The Cortex-A7 Series based Matrix IoT gateways come with pre-installed *nginx* web server. The configuration file is `/etc/nginx/nginx.conf`.

### 13.2 Root Web Page Directory

The default root web page directory is `/var/www/localhost/html`. This path can be changed by modifying the above configuration file.

```
[root@matrix_120601 ~]# ls /var/www/localhost/html
50x.html  index.html
[root@matrix_120601 ~]#
```

### 13.3 PHP Support

The Cortex-A7 Series based Matrix IoT gateways support commonly used server-side script languages, including Perl, PHP and Python. Perl and Python support are built-in, while PHP support needs to be installed manually using **apt-get** command.

- ***apt-get install -y php php-fpm php-fpm-apache2 php-cli***

```
[root@matrix_120601 ~]#php-cgi -v
PHP 7.4.16 (cgi-fcgi) (built: Mar  2 2021 10:35:17)
Copyright (c) The PHP Group

[root@matrix_120601 ~]#php-fpm -v
PHP 7.4.16 (fpm-fcgi) (built: Mar  2 2021 10:35:17)
Copyright (c) The PHP Group
Zend Engine v3.4.0, Copyright (c) Zend Technologies

[root@matrix_120601 ~]#php -v
PHP 7.4.16 (cli) (built: Mar  2 2021 10:35:17) ( NTS )
Copyright (c) The PHP Group
```

## 14. Auto-execute User Applications/Shell Scripts

### 14.1 Modify the `/etc/rc5.d` directory

To automatically start user applications after system boot-up, please edit a shell script to execute the program, and put that script file to the folder: `/etc/rc5.d`.

```
[root@matrix_120601 rc5.d]# ls
S01networking@   S19nfscommon@   S60php-fpm@     S99stop-bootlogd@
S02dbus-1@      S20atd@          S90crond@       S99usb gadget@
S09sshd@        S20hwclock.sh@  S92nginx@       S99webmin@
S12rpcbind@     S20nfs server@   S99readyled@
S15mountnfs.sh@ S20syslog@      S99rmnologin.sh@
```

### 14.2 Modify the `/etc/profile`

To automatically start user shell scripts after system boot-up, please modify the `/etc/profile` accordingly.

## 15. Change the Welcome Message

The welcome message file is `/etc/motd`, the default content is shown below, modify the content at your will.

```
[root@matrix_120601 ~]# cat /etc/motd
Welcome to

      **                ** **
      **                ** **
     ** **            ** **
     ** **          ***** ** ** *****
    **      ** ** ** ** ** ** ** ** ** ** ** **
    **      ** ** ** ** ** ** ** ** ** ** ** ** *****
   *****          ** ** ** ** ** ** ** ** ** ** **
  **      ** ** ** ** ** ** ** ** ** ** ** ** ** ** ** **
  **      ** ** ** ** ** ** ** ** ** ** ** ** *****

For further information check:
http://www.artila.com/
```

## 16. Reboot the System

To re-boot the system, use the ***reboot*** command.

```
[root@matrix_120601 ~]# reboot  
Broadcast message from root@Matrix752 (ttyGS0) (Sun May 8 15:51:47 2016):  
The system is going down for reboot NOW!
```

## 17. User Application Development

### 17.1 Install C/C++ Cross Compilation Toolchain

The following instructions are based on **64-bit** Ubuntu Linux environment:

Step 1, Download the toolchain installation script from Artila's website, the URL is:

```
$wget
```

```
http://www.artila.com/download/imx6ul/linux/sdk/poky-glibc-x86\_64-meta-toolchain-cortexa7t2hf-neon-m-x6ull-toolchain-3.3.1.sh
```

Step 2, Execute the toolchain installation script.

```
$ sh
```

```
poky-glibc-x86_64-meta-toolchain-cortexa7t2hf-neon-m-x6ull-toolchain-3.3.1.sh
```

Step 3, Activate the environment settings.

```
$ source
```

```
poky-glibc-x86_64-meta-toolchain-cortexa7t2hf-neon-m-x6ull-toolchain-3.3.1.sh
```

### 17.2 Using the C Cross Compiler

Step 1: Execute **\$CC** command to compile the C source file.

Step 2: Execute **scp** command to upload the compiled binary file to the Matrix IoT gateway.

```
$ cat hello.c
#include <stdio.h>

int main(){
printf("Hello World!\n");
return 0;
}

$ $CC -o hello_c hello.c

$ scp hello_c root@192.168.1.70:/home/root
root@192.168.1.70's password:
hello_c                               100% 9800      9.6KB/s   00:00

$
```

### 17.3 Using the C++ Cross Compiler

Step 1: Execute **\$CXX** command to compile the C++ source file.

Step 2: Execute **scp** command to upload the compiled binary to the Matrix IoT gateway.

```
$ cat hello.cpp
#include <iostream>
using namespace std;
int main() {
cout << "Hello! World!\n";
return 0;
}

$ $CXX -o hello_cpp hello.cpp

$ scp hello_cpp root@192.168.1.70:/home/root
root@192.168.1.70's password:
hello_cpp                               100%  11KB  10.9KB/s   00:00

$
```

### 17.4 Using the Native C Compiler

User application can also be directly developed on the **CORTEX-A7 SERIES** based Matrix IoT gateways. By default, **gcc** toolchain is pre-installed on the **CORTEX-A7 SERIES** based Matrix IoT gateways.

```
[root@matrix_120601 ~]# cat hello.c
#include <stdio.h>
int main()
{
printf("Hello World!\n");
}

[root@matrix_120601 ~]# gcc -o hello hello.c

[root@matrix_120601 ~]# ./hello
Hello World!
```

## 17.5 Using the Native C++ Compiler

### 17.5.1 Install the Native C++ Toolchain

Users can install the native C++ toolchain via **apt-get** command. Two packages are needed to build a C++ source file, the **g++** package and the **g++-symlinks** package.

- **apt-get install g++ g++-symlinks**

### 17.5.2 Using the Native C++ Compiler

```
[root@matrix_120601 ~]# cat hello.cpp
#include <iostream>
using namespace std;
int main() {
cout << "Hello World!\n";
return 0;
}

[root@matrix_120601 ~]# g++ -o hello_cpp hello.cpp

[root@matrix_120601 ~]# ./hello_cpp
Hello World!

[root@matrix_120601 ~]#
```

## 17.6 Using the Python Interpreter

The **CORTEX-A7 SERIES** based Matrix IoT gateways come with pre-built Python 3 interpreter.

```
[root@matrix_120601 ~]# python3
Python 3.8.2 (default, Feb 25 2020, 10:39:28)
[GCC 9.3.0] on linux
Type "help", "copyright", "credits" or "license" for more information.
>>>
```

The Python **pip3** package manager is also included by default. To upgrade the pip itself, execute the following command:

- **pip3 install --upgrade pip**

## 18. GPIO Operation

The CORTEX-A7 series comes a bunch of GPIO (General Purpose IO) pins.

By implementation, there are 15 GPIO pins are controlled in user space.

GPIO definitions are shown as below:

No.	Software Definition	Hardware Functions	Pin location on M-X6ULL-B
GPIO1	<a href="#">gpio40</a>	GPIO2_8	(CN1 pin 10)
GPIO2	<a href="#">gpio41</a>	GPIO2_9	(CN1 pin 12)
GPIO3	<a href="#">gpio42</a>	GPIO2_10	(CN1 pin 14)
GPIO4	<a href="#">gpio43</a>	GPIO2_11	(CN1 pin 16)
GPIO5	<a href="#">gpio44</a>	GPIO2_12	(CN1 pin 18)
GPIO6	<a href="#">gpio45</a>	GPIO2_13	(CN1 pin 20)
GPIO7	<a href="#">gpio111</a>	GPIO4_15	(CN1 pin 15)
GPIO8	<a href="#">gpio107</a>	GPIO4_11	(CN1 pin 17)
GPIO9	<a href="#">gpio46</a>	GPIO2_14	(CN1 pin 19)
GPIO10	<a href="#">gpio47</a>	GPIO2_15	(CN1 pin 21)
GPIO11	<a href="#">gpio9</a>	GPIO1_9	(CN1 pin 23)
GPIO12	<a href="#">gpio30</a>	GPIO1_30	(CN3 pin 31)
GPIO13	<a href="#">gpio31</a>	GPIO1_31	(CN3 pin 33)
GPIO14	<a href="#">gpio109</a>	GPIO4_13	(CN3 pin 35)
GPIO15	<a href="#">gpio110</a>	GPIO4_14	(CN3 pin 37)

It means,

- the **GPIO2\_11**, which is located on the SoM M-X6ULL's pin16 of the CN1 connector, is mapped to number **gpio43**;
- the **GPIO1\_31**, which is located on SoM M-X6ULL's pin31 of the CN3 connector, is mapped to number **gpio30**

All information is listed as following:

<https://www.kernel.org/doc/Documentation/gpio/sysfs.txt>

```
[root@matrix_120601 gpio]# pwd
/gpio
[root@matrix_120601 gpio]# ls
GPIO1 GPIO10 GPIO11 GPIO12 GPIO13 GPIO14 GPIO15 GPIO2
GPIO3 GPIO4 GPIO5 GPIO6 GPIO7 GPIO8 GPIO9
[root@matrix_120601 gpio]# cd GPIO1
[root@matrix_120601 gpio1]# ls
Active_low device direction edge power subsystem uevent value
```

For Example,  
to set gpio31 as output:

```
[root@matrix_120601 ~]# cd /sys/class/gpio/

[root@matrix_120601 gpio]# ls
export  gpiochip0  gpiochip128  gpiochip32  gpiochip64  gpiochip96  un
export

[root@matrix_120601 gpio]# echo 31 > export

[root@matrix_120601 gpio]# ls
export      gpiochip128  gpiochip64  gpio31
gpiochip0  gpiochip32   gpiochip96  unexport

[root@matrix_120601 gpio]# cd gpio31

[root@matrix_120601 gpio31]# ls
active_low  device  direction  edge  power  subsystem  uevent  value

[root@matrix_120601 gpio31]# echo 'out' > direction

[root@matrix_120601 gpio31]# echo 1 > value

[root@matrix_120601 gpio31]# echo 0 > value

[root@matrix_120601 gpio31]# cd ..

[root@matrix_120601 gpio]# ls
export      gpiochip128  gpiochip64  gpio31
gpiochip0  gpiochip32   gpiochip96  unexport

[root@matrix_120601 gpio]# echo 31 > unexport

[root@matrix_120601 gpio]# ls
export  gpiochip0  gpiochip128  gpiochip32  gpiochip64  gpiochip96  un
export
```

## 19. Install an USB Wi-Fi Dongle

The CORTEX-A7 SERIES based Matrix IoT gateways support USB Wi-Fi dongles.

### 19.1 Install Hardware Driver

The USB Wi-Fi driver can be installed via apt-get utility.

The following example is using RT8192 wifi dongle.

```
[root@matrix 120601 ~]# apt-get install kernel-module-rt18xxxu linux-firmware-rt18192cu
```

### 19.2 Modify the network interface configuration

The network interface configuration file path is */etc/network/interfaces*. A typical configuration example is listed below:

```
# Wireless interfaces
auto wlan0
iface wlan0 inet dhcp
    wireless_mode managed
    wireless_essid any
    wpa-driver nl80211, wext
    wpa-conf /etc/wpa_supplicant.conf
```

Be noted the last line of the above example, which specifies an additional configuration file for WPA settings. In this example, the WPA configuration file path is */etc/wpa\_supplicant.conf*.

### 19.3 Modify the WPA configuration

Modify the `/etc/wpa_supplicant.conf` according to the Wi-Fi environment of your factory/office. A typical configuration example is listed below:

```
# WPA configuration

ctrl_interface=/var/run/wpa_supplicant
ctrl_interface_group=0
update_config=1
ap_scan=1

# WEP example
network={
    ssid="Artila"
    key_mgmt=NONE
    wep_key0=ABCABCABC
}

# WPA/WPA2 example
Network={
    ssid="Artila"
    key_mgmt=WPA-PSK
    auth_alg=OPEN
    psk="ABCABCABC"
}
```

### 19.4 Restart the wireless network interface

```
[root@matrix_120601 ~]# ifdown wlan0

[root@matrix_120601 ~]# ifup wlan0
```

## 20. Webmin Support

The CORTEX-A7 SERIES based Matrix IoT gateways support the Webmin, which is a browser\_based system management tool.

To access the Webmin, please visit <https://192.168.2.127>

**Username:** admin

**Password:** admin

## 21. Setup Eclipse IDE

Users can integrate the CORTEX-A7 SERIES tool chain into the Eclipse IDE. It can be downloaded the Eclipse IDE for **C/C++** Developers (**Luna**) from

<https://www.eclipse.org/downloads/packages/release/Luna/SR2>

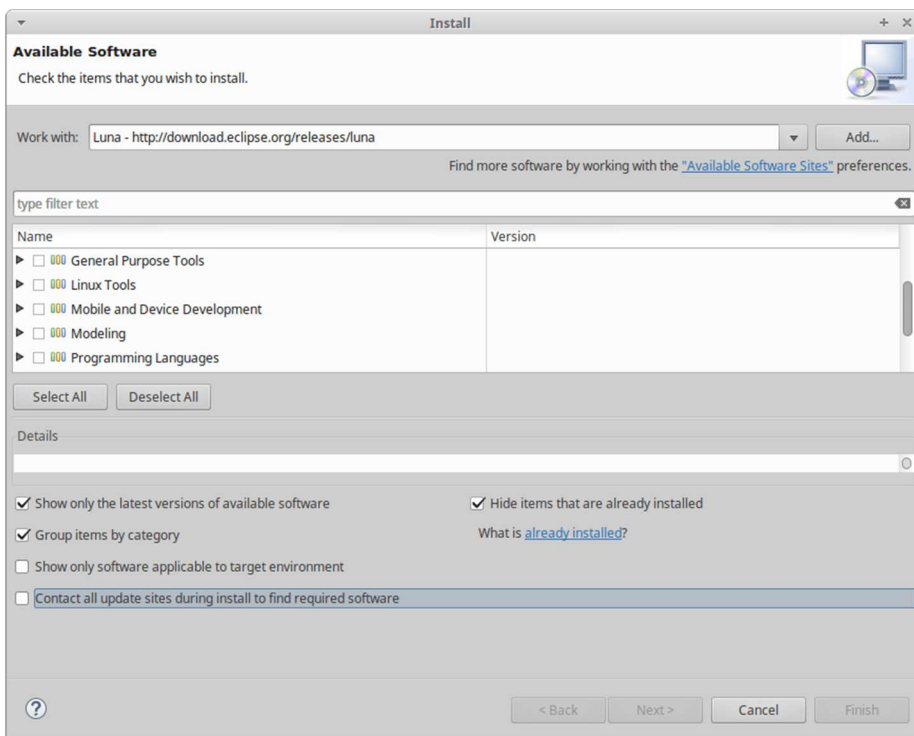

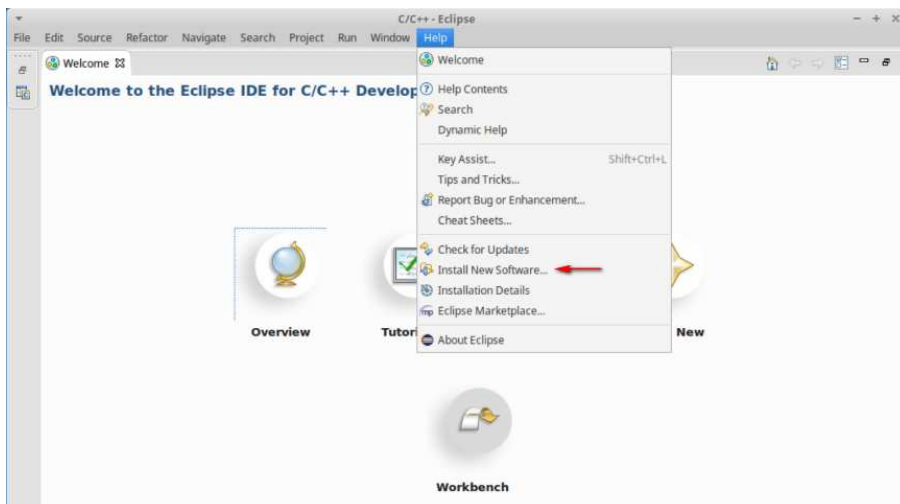

### 21.1 Configure the Eclipse IDE

Step 1, Start the Eclipse IDE.

Step 2, From “Help” menu select “Install New Software”

- Add “Luna - <http://download.eclipse.org/releases/luna>”.
- Select the following items (If these selections do not appear in the list, that means the items are already installed.)
  - Linux Tools
    - Linux Tools LTTng Tracer Control
    - Linux Tools LTTng Userspace Analysis
    - LTTng Kernel Analysis
  - Mobile and Device Development
    - C/C++ Remote Launch (Requires RSE Remote System Explorer)
    - Remote System Explorer End-user Runtime
    - Remote System Explorer User Actions
    - Target Management Terminal (Core SDK)
    - TCF Remote System Explorer add-in
    - TCF Target Explorer
  - Programming Languages
    - C/C++ Autotools Support
    - C/C++ Development Tools

## Step3, Complete the installation and restart the Eclipse IDE

## 21.2 Install the Eclipse Yocto Plug-in

Step1, From the “Help” menu select “Install New Software”

- Add URL “<http://downloads.yoctoproject.org/releases/eclipse-plugin/2.0/luna>” and provide a meaningful name.
- Select the following items
  - Yocto Project ADT Plug-in,
  - Yocto Project Bitbake Commander Plug-in
  - Yocto Project Documentation plug-in.

Step2, Complete the installation and restart the Eclipse IDE

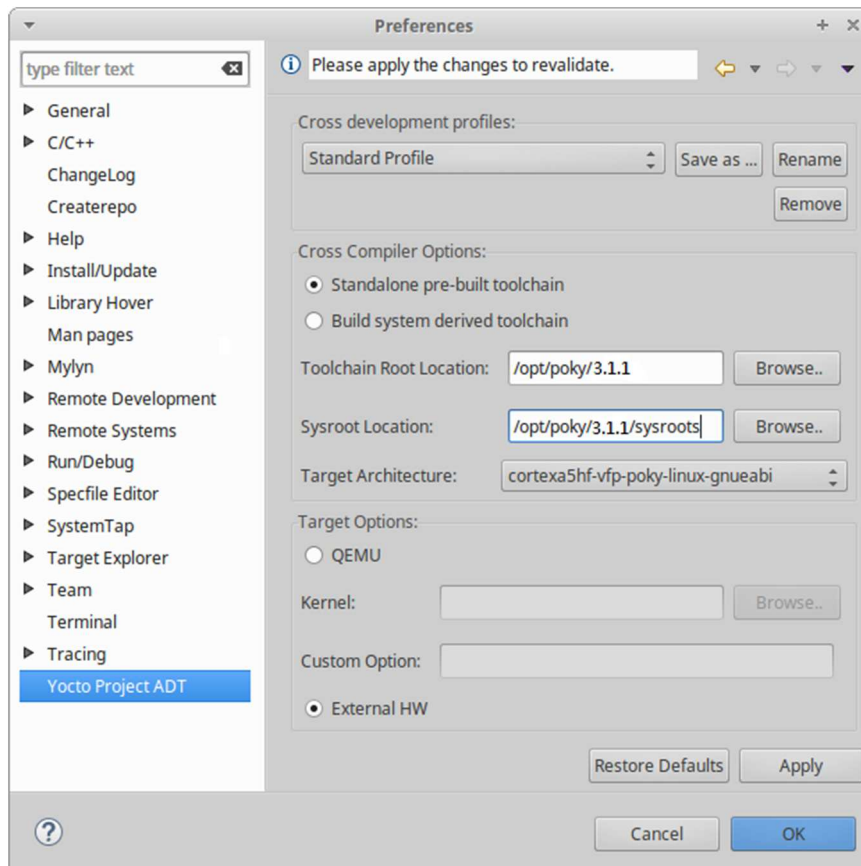

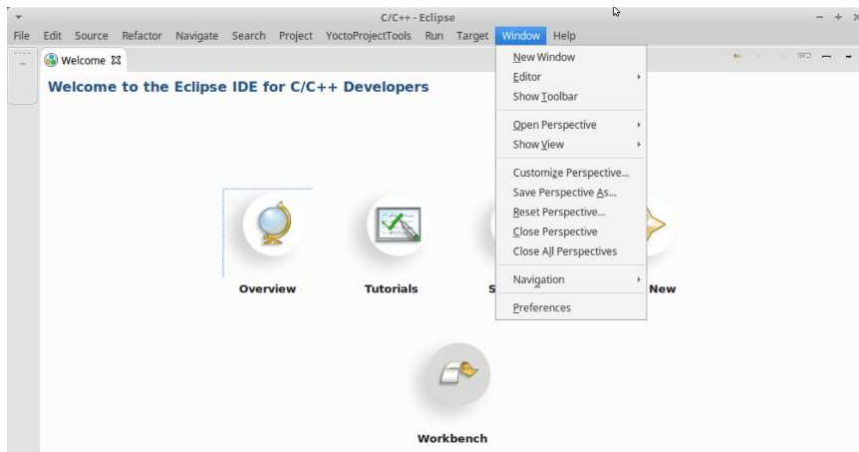

### 21.3 Configuring the Cross-Compiler Options

Step1, From the “Windows” menu select “Preferences”

Step2, Click "Yocto Project ADT" to display the configuration screen

Step3, Selecting the Toolchain Type: **Standalone pre-built toolchain**

- Point to the Toolchain: **/opt/poky/3.1.1**
- Specify the Sysroot Location: **/opt/poky/3.1.1/sysroots**
- Select the Target Architecture: **cortexa7hf-vfp-poky-linux-gnueabi**

## 21.4 Create a Hello World Project

Step1, Select "Project" from the "File -> New" menu

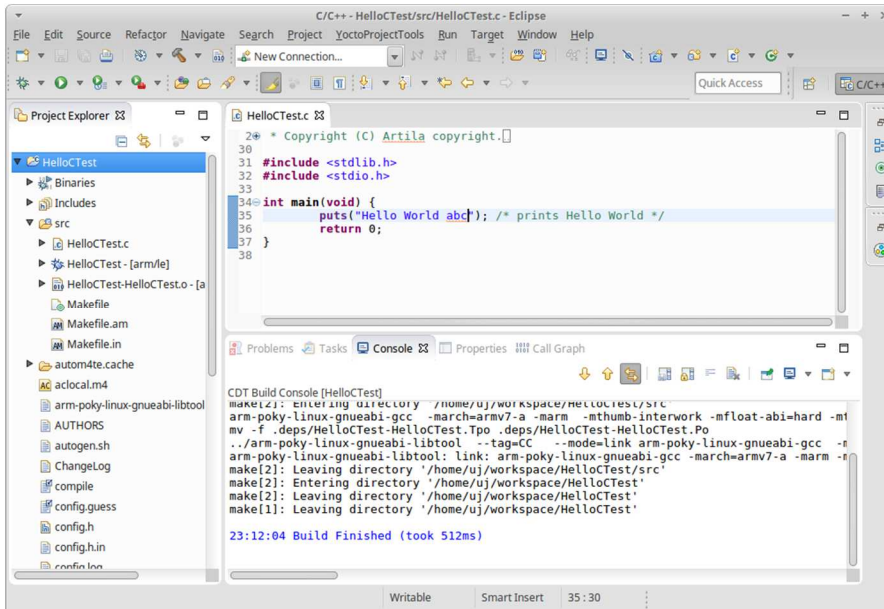

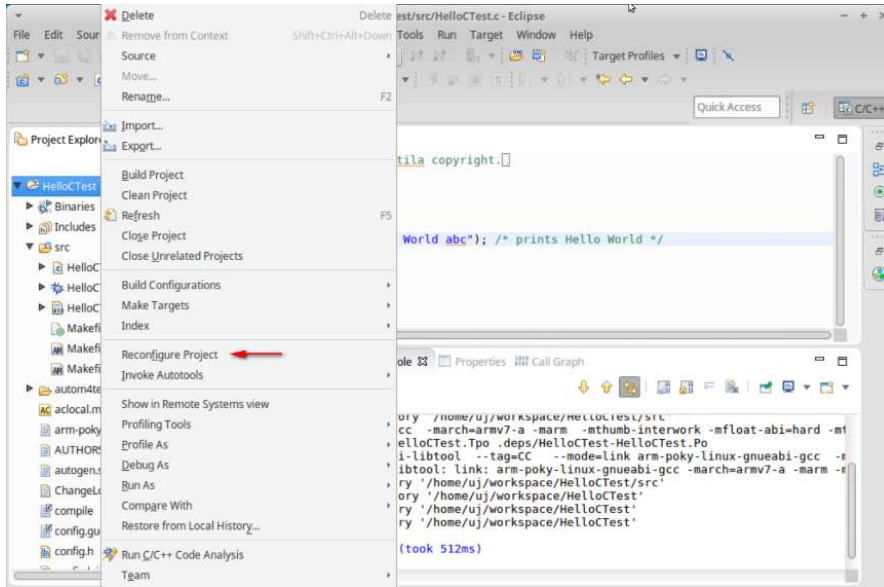

- Double click C/C++
- Double click C Project to create the project
- Expand Yocto Project ADT Autotools Project  
select Hello World ANSI C Autotools Project.  
(This is an Autotools-based project based on a Yocto template)
- Put a name in the Project name field.  
(Do not use hyphens as part of the name)
- Click "Next".
- Add information in the Author and Copyright notice fields.
- Click "Finish".

Step2, Right-click in the navigation pane and select "Reconfigure Project" from the pop-up menu. This selection reconfigures the project by running autogen.sh in the workspace for your project.

Step3, To build the project select "Build Project" from the "Project" menu.

## 22. Setup SIM card

The CORTEX-A7 SERIES based Matrix IoT gateways, Model Matrix-752 & SBC-7530, support the miniPCIe slot can be install LTE/4G module for communication.

SIM Card setting is necessary before access by following:

**NOTICE:** Please unlock SIM PIN code first

Example: SIM7100E

***apt install -y kernel-module-option kernel-module-qmi-wwan***

***kernel-module-cdc-wdm kernel-module-usbnet libqmi***

***reboot***

### ***usb-devices***

```
T: Bus=01 Lev=01 Prnt=01 Port=00 Cnt=01 Dev#= 2 Spd=480 MxCh= 0
D: Ver= 2.00 Cls=00(>ifc ) Sub=00 Prot=00 MxPS=64 #Cfgs= 2
P: Vendor=1e0e ProdID=9001 Rev=02.32
S: Manufacturer=SimTech, Incorporated
S: Product=SimTech, Incorporated
S: SerialNumber=0123456789ABCDEF
C: #Ifs= 7 Cfg#= 1 Atr=80 MxPwr=500mA
I: If#=0x0 Alt= 0 #EPs= 2 Cls=ff(vend.) Sub=ff Prot=ff Driver=option
I: If#=0x1 Alt= 0 #EPs= 3 Cls=ff(vend.) Sub=00 Prot=00 Driver=option
I: If#=0x2 Alt= 0 #EPs= 3 Cls=ff(vend.) Sub=00 Prot=00 Driver=option

I: If#=0x5 Alt= 0 #EPs= 3 Cls=ff(vend.) Sub=ff Prot=ff Driver=qmi_wwan
I: If#=0x6 Alt= 0 #EPs= 2 Cls=ff(vend.) Sub=42 Prot=01 Driver=(none)
```

### ***/etc/qmi-network.conf***

```
APN=internet
```

### ***/etc/network/interfaces/***

```
auto wwan0
iface wwan0 inet dhcp
    pre-up qmi-network /dev/cdc-wdm0 start
    pre-down qmi-network /dev/cdc-wdm0 stop
```

Verify that SIM is inserted properly

***echo -ne "AT+CPIN?\r" | eval /usr/bin/microcom -t 500 /dev/ttyUSB2***

```
AT+CPIN?
+CPIN: READY

OK
```

Get signal strength

**`echo -ne "AT+CSQ\r" | eval /usr/bin/microcom -t 500 /dev/ttyUSB2`**

```
AT+CSQ
+CSQ: 17,99

OK
```

## 23. Setup “STATUS” LED indicator

The CORTEX-A7 SERIES based Matrix IoT gateways, Model SBC-7530, support three “STATUS” LED indicators for user definition control by GPIO4.IO27,GPIO4.IO28

Example 1, Enable and turn on the LED1

```
echo 0 > /sys/class/leds/user1/brightness
```

Example 2, Turn off and disable the LED1

```
echo 1 > /sys/class/leds/user1/brightness
```

## 24. Setup Digital Input / Digital Output

The **CORTEX-A7 SERIES** based Matrix IoT gateways, Model Matrix-752 & SBC-7530, support digital input and digital output port.

Matrix-752

DI / Digital Input (GPIO: GPIO4.IO23, GPIO4.IO25)

DO / Digital Output (GPIO: GPIO1.IO31, GPIO1.IO30)

SBC-7530

DI / Digital Input (GPIO: GPIO4.IO23, GPIO4.IO25)

DO / Digital Output (GPIO: GPIO4.IO19)

Example 1, Read value of DI1

```
cat /gpio/DI1/value
```

Example 2, Set High of DO1

```
echo 0 > /gpio/DO1/value
```

## 25. Setup CAN port

The CORTEX-A7 SERIES based Matrix IoT gateways support CAN port that can be setup as following:

Command:

```
apt-get install apt-get -y install kernel-module-can-raw kernel-module-can  
can-utils
```

Baudrate setting:

```
ip link set can0 up type can bitrate 125000
```

Example:

```
read: candump can0
```

```
send: cansend can0 7df#02010d
```

## 26. Setup Audio Out

The CORTEX-A7 SERIES based Matrix IoT gateway, Model SBC-7530 support one Audio out as line-out R/L port, optional earphone R/L.

Command: ***aplay (support format type: voc, wav, raw or au)***

Example: ***aplay sample.wav***

## 27. Setup Desktop Environment

The CORTEX-A7 SERIES based Matrix IoT gateway, Model SBC-7530 and M-X6ULL-B support “MatchBOX” as desktop environment.

Command: ***apt install -y packagegroup-core-x11  
packagegroup-core-x11-matchbox matchbox-wm***

## 28. Restore to Factory Default

The following information shows how to restore to factory default:

### Step 1,

Power-on Matrix-752/SBC-7530/M-X6ULL-B (“Ready” LED in green)

After system ready (“Ready” LED turns to yellow),

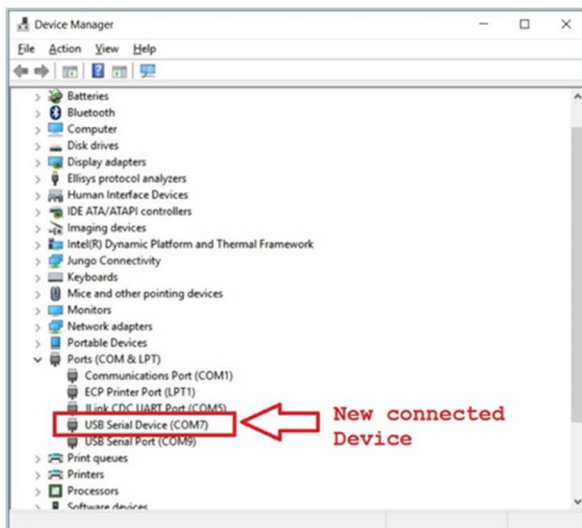

Connect the Matrix-752/SBC-7530/M-X6ULL-B’s USB/serial console to a PC

### Step 2,

It shows *USB Serial Device “COMx”* at Device Manager / PC Windows:

*X : depends on your PC's environment*

Communicate via this Serial device (EX. By TeraTerm @115200,N81).

**Step 3,**

Execute the command “**restore factory**” and “**y**”, this command will force Matrix-752/SBC-7530/M-X6ULL-B to boot again to start the restore process.

```
# restore factory  
Restore from factory, Sure?(y/n)  
y  
.....
```

The **READY** LED will be blinking during the restore process

This process may take 20~30minutes.

USB/serial console is NOT accessible during the restore process.

After completed above steps, the Matrix-752/SBC-7530/M-X6ULL-B will automatically reboot again when the backup process is finished.

## 29. Backup the “File System”

The following information shows how to restore to factory default:

### Step 1,

Insert an empty 16GB(or above) USB drive (FAT32 format). Let's say the USB drive maps to `/dev/sda1`.

### Step 2,

Power-on Matrix-752/SBC-7530/M-X6ULL-B (“Ready” LED in green)

After system ready (“Ready” LED turns to yellow),

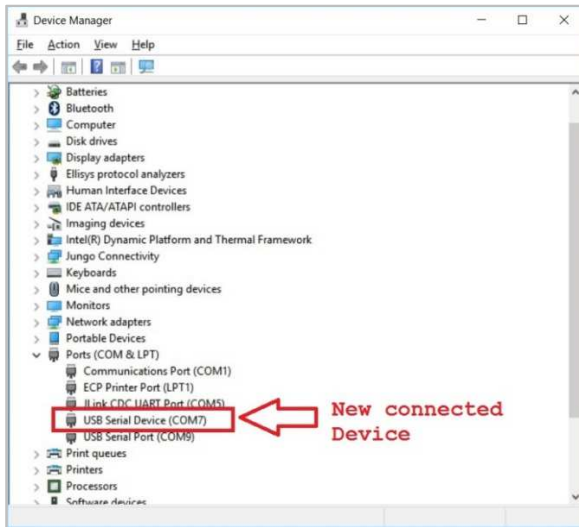

Connect the Matrix-752/SBC-7530/M-X6ULL-B’s USB/serial console to a PC

**Step 3,**

It shows USB Serial Device "COMx" at Device Manager / PC Windows:

X : depends on your PC's environment

Communicate via this Serial device (EX. By TeraTerm @115200,N81).

**Step 4,**

Execute the command "**backup /dev/sda1**" and "**y**", this command will force Matrix-752/SBC-7530/M-X6ULL-B to boot again to start the backup process.

```
# backup /dev/sda1
Backup to /dev/sda1, Sure?(y/n)
y
.....
```

The **READY** LED will be blinking during the backup process

This process may take **20~30** minutes

USB/serial console is NOT accessible during the backup process

After completed above steps, the Matrix-752/SBC-7530/M-X6ULL-B will automatically reboot again when the backup process is finished.

Remove the USB drive and keep it properly as the golden copy.

## 30. Restore the “File System”

The following information shows how to restore to factory default:

### Step 1,

Insert the golden copy USB drive. Let's say the USB drive maps to `/dev/sda1`.

### Step 2,

Power-on Matrix-752/SBC-7530/M-X6ULL-B (“Ready” LED in green)

After system ready (“Ready” LED turns to yellow)

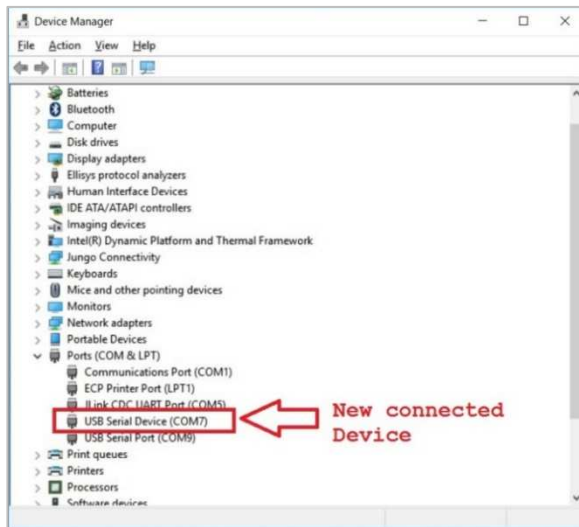

Connect the Matrix-752/SBC-7530/M-X6ULL-B’s USB/serial console to a PC

**Step 3,**

It shows USB Serial Device "COMx" at Device Manager / PC Windows:

X : depends on your PC's environment

Communicate via this Serial device (EX. By TeraTerm @115200,N81).

**Step 4,**

Execute the command "**restore /dev/sda1**" and "**y**", this command will force Matrix-752/SBC-7530/M-X6ULL-B to boot again to start the restore process.

```
# restore /dev/sda1
Restore from /dev/sda1, Sure?(y/n)
y
.....
```

The **READY** LED will be blinking during the restore process,

This process may take 20~30minutes

USB/serial console is NOT accessible during the restore process.

After completed above steps, the Matrix-752/SBC-7530/M-X6ULL-B will automatically reboot again when the restore process is finished.

Remove the USB drive.
